

CUSTOM MOULDINGS

315°C

In addition to the products listed in this brochure we can modify existing designs or produce completely new ones to suit your particular application. We offer a wide range of materials including Polyisoprene and SBR to compounds such as Neoprene, Nitrile and EPR to more advanced organic or inorganic compounds such as Hypalon® Epichlorohydrin, Ultrabake™ Silicone, Fluorosilicone and Viton® . Our materials, including rubber to metal bondings, solve engineering problems dealing with shock absorption, vibration, insulation, sealing, corrosion protection, friction, temperature and abrasion protection as well as masking solutions. We offer low tooling costs from one offs to large production runs.
