

GREENTREE FOR CUSTOM MOULDINGS

- Improve productivity
- Increase production line speeds
- Create better finish quality
- Reject/rework fewer parts
- Eliminate manual steps from the finishing process
- Reusable

Recent advances in custom moulded rubber masks have revolutionised the masking industry. Manufactured from the latest high-tech materials, they can protect even the most unusual surfaces and parts against the most hostile finishing processes.

Easy to install and remove, custom moulded masks are reusable, have excellent longevity and can mask almost any two or three dimensional part or aperture.

Whilst tooling costs can appear higher when compared with other masking methods, custom masks eliminate multiple manual finishing steps, dramatically speed masking installation, reduce rework and improve productivity.

With its own in-house compounding facility Greentree-Shercon offers an extensive range of materials both organic and inorganic, including conductive rubber and rubber to metal bondings to solve the most demanding of application.

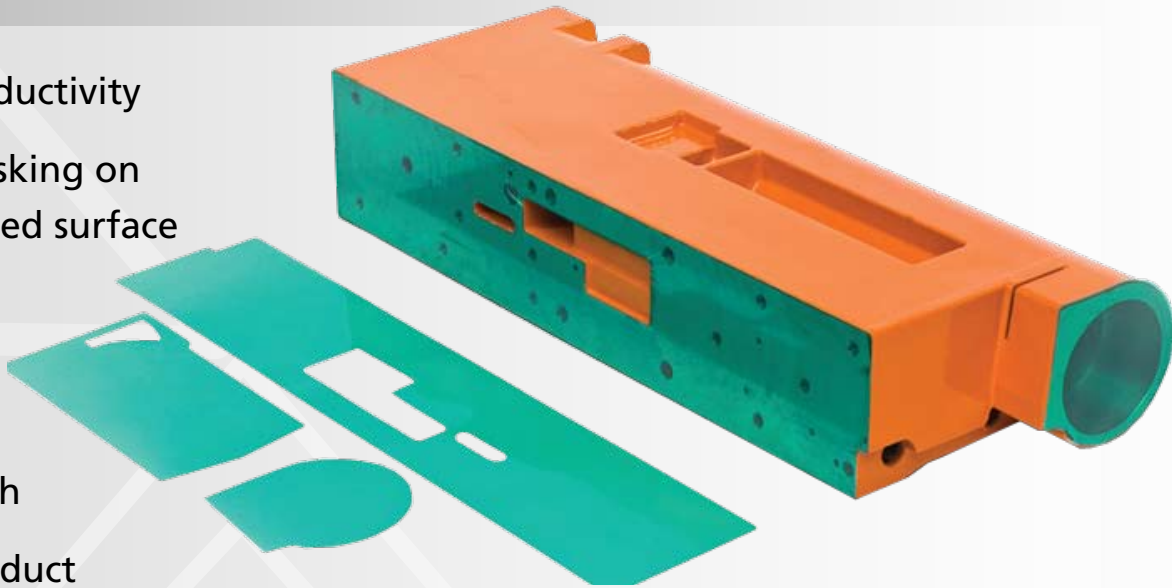

Whether it be one-offs or a large production run we can engineer a solution to your masking problem.

GREENTREE FOR CUSTOM DIE-CUTS

- Improve productivity
- Effective masking on a flat or curved surface
- Wide range of materials
- Consistent product finish
- Effective product quality check
- No tooling costs
- No minimum order quantity

Greentree-Shercon custom die-cuts are extremely effective when masking a flat or curved surface. Easy to apply and remove, chemical and heat resistant, leaving no residue. Custom shapes can be produced to meet your application in a wide range of materials including polyester, vinyl & crepe paper, metal foil & glass fibre, magnetic and rubber offering temperatures up to 260°C

Die-cuts can be supplied with tabs, in kit form or on a transfer liner. There are no minimum order quantities so we can produce a single

shape or a larger production run. Die cuts eliminate the need for knives, speed up masking operations and improve quality by consistent accuracy.

With **no tooling charge** Greentree can provide you with samples within 24 hours and once approved full production within a few days.

Call our engineers now on **01684 533 800** or e-mail us on **sales@greentree-shercon.co.uk** for more information or a visit.
